```

Command Window

```
>> foo = 40+2;
>> foo

foo =

    42

>> why
The rich rich and tall and good system manager suggested :
>> why
He wanted it that way.
fx >> |
```

Workspace

Name	Value
ans	42
badsubs	1x2 cell
cfg	1x1 struct
dirs	1x1 struct
foo	42
ind	1398751
lh_subs	1x4 cell
max_pow	0.0154
mri_path	'Z:\PD_motor\fs_subi

## What is FieldTrip?

An open-source MATLAB toolbox for processing and analysing electrophysiological data

- Data-processing
  - Analysis of evoked and induced responses
  - Source analysis
  - Connectivity
  - Group analysis
  - Statistics
-

# Set up FieldTrip

## Download FieldTrip:

<http://www.fieldtriptoolbox.org/download>

- Sign up
- Find current date
- Download
- Put in easy to access folder (e.g. [/home/](#) or [C:/](#))

## GitHub:

- <http://github.com/fieldtrip/fieldtrip>

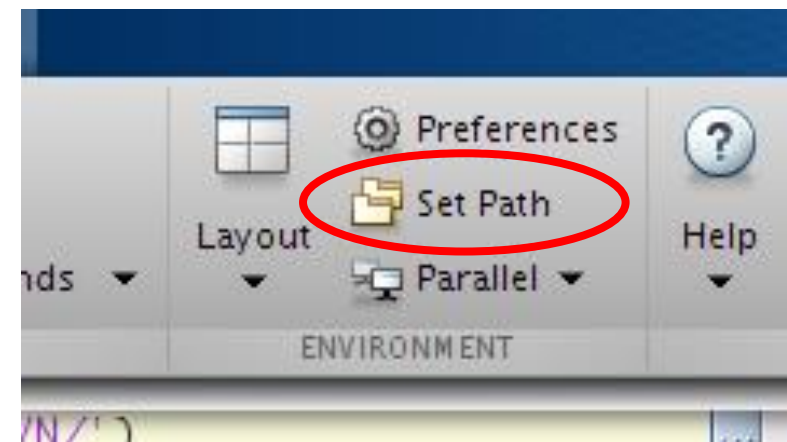

## Set up FieldTrip

In Matlab terminal:

```
> addpath '~/mypath/fieldtrip'  
> ft_defaults  
> cd '/my_working_directory'
```

NB: If you have SPM as a default path, remove before setting up FieldTrip.

```
> restoredefaultpath
```

# FieldTrip functions

```
data_out = ft_functionname(cfg)
```

```
data_out = ft_functionname(cfg, data_in)
```

"cfg" is configuration structure

```
cfg.key1 = value1
```

```
cfg.key2 = value2
```

*...etc.*

Tip: Start each new `cfg` by clearing previous

```
cfg = []; %Reset cfg
```

---

# Need more help?

Get documentation for functions for help, cfg options, etc, use the help function in MATLAB:

```
> help ft_functionname
```

Online tutorial, examples and documentation:

<http://www.fieldtriptoolbox.org/>

---

# FieldTrip data structures (example)

`data =`

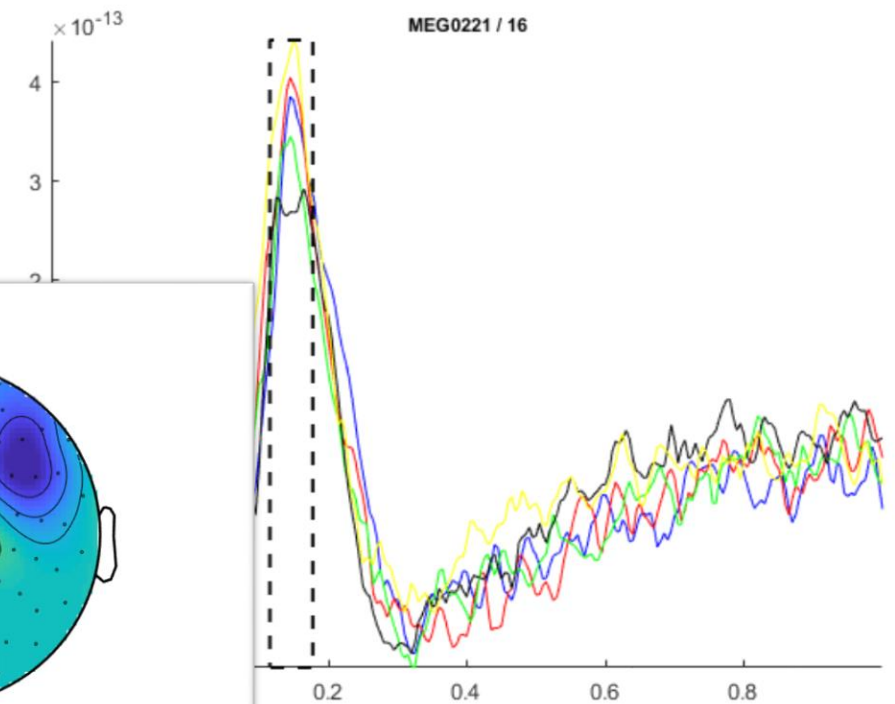

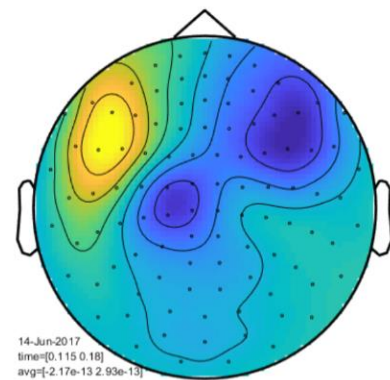

<code>hdr:</code>	<code>[1x1 struct]</code>	<i>Header info</i>
<code>label:</code>	<code>{306x1 cell}</code>	<i>Channel names</i>
<code>time:</code>	<code>{1x600 cell}</code>	<i>Time axis for each trial</i>
<code>trial:</code>	<code>{1x600 cell}</code>	<i><b>Trial data</b> [channels x timepoints]</i>
<code>fsample:</code>	<code>200</code>	<i>Sampling frequency (Hz)</i>
<code>sampleinfo:</code>	<code>[600x2 double]</code>	<i>[Start end] of each trial in raw data</i>
<code>trialinfo:</code>	<code>[600x3 double]</code>	<i>Trial bookkeeping</i>
<code>grad:</code>	<code>[1x1 struct]</code>	<i>Gradiometer positions, etc</i>
<code>elec:</code>	<code>[1x1 struct]</code>	<i>Electrode positions, etc</i>
<code>cfg:</code>	<code>[1x1 struct]</code>	<i>Previous configuration (for bookkeeping)</i>

---

## What is in the data structures?

- > `cfg = [];`
- > `cfg.layout = 'neuromag306mag.lay';`
- > `ft_multiplotER(cfg, timelocked{:});`

## Summary

- `data_out = ft_functionname(cfg, data_in)`
  - `help ft_functionname`
  - Write variable name in terminal to see what it contain
-
